

AMAH MARTIN

DATA ANALYTICS ENGINEER

Dayton, OH | 502-536-8732 | ammartin88@protonmail.com | linkedin.com/in/amahmartin | github.com/ammartin8

PROFESSIONAL SUMMARY

- Data Analytics Engineer specializing in modern data analytical engineering workflows (GCP/Azure, dbt, Python, SQL) with 7+ years of applied domain knowledge across data analysis and science at large-scale industries.
- Built core internal analytics and reporting infrastructure (Power BI/Oracle SQL) at Humana, reducing manual data refresh times by 81% for a platform tracking up to 1.5M+ customers annually.
- Implemented data validation checks that reduced missing member record coverage for program enrollments from 25% to near 0%; directly enabling 155K+ additional records to be accurately attributed to the correct member programs.
- Reduced compliance reporting turnaround time from 6 hours to under 30 minutes through SAS automation, meeting strict regulatory deadlines consistently.
- Partnered with IT and cross-functional teams to resolve data quality assurance challenges; trained 30+ business users on visualization tools, resulting in improved self-service adoption and reduced work item volume by 15%.

TECHNICAL SKILLS

Programming Languages: SQL, Python, PySpark, Bash

Databases: PL/SQL (Oracle), PostgreSQL, SQLite

Cloud & Infrastructure: Azure, Google Cloud Platform, Terraform, Docker

Orchestration: Airflow, Kestra, Cron Jobs

Tools & Systems: Toad Data Point, Power BI, Databricks, dbt, SQL Server Management System, Git, GitHub, Jupyter Notebooks, Anaconda, Statistical Analysis Software (SAS), Tableau

TECHNICAL PROJECTS

Cloud-Native ETL Infrastructure Portfolio | https://github.com/ammartin8/storage_metrics_etl_orchestration

Architected a scalable cloud-native workflow using Google Cloud Platform, Infrastructure (Terraform, Docker), orchestration (Airflow), and analytics engineering (dbt) capable of processing high-volume batched data (~87GB) into actionable business intelligence.

PROFESSIONAL EXPERIENCE

DATA SCIENTIST | Humana | Remote

May 2022 – Dec 2025

- Part of the Marketing Data Analytics team supporting a \$30B+ large-scale enterprise (67K employees). Responsible for end-to-end analytics, developing data models that support Power BI, and validating data quality across 14M+ customer records.
- Implemented data validation checks that reduced missing member record coverage for program enrollments from 25% to near 0%; directly enabling 155K+ additional records to be accurately attributed to the correct member loyalty programs.

- Implemented data quality checks in Databricks to identify gaps in digital tracking for a member rewards pilot program; validated findings against legacy SQL sources to enable engineering fixes resulting in 8K additional customer visit attributions by channel.
- Reduced ETL execution time by 81% through rebuilding SQL data models and database connectors, increasing throughput for monthly campaign reporting on 1.5M+ customers annually.
- Extended the Marketing Test and Learn Reporting Platform by integrating data models using scalable SQL transformation logic for a large-scale campaign, reducing processing time by 32+ hours per test cycle.
- Automated report refreshes and email alerts via Power Automate for business stakeholders, summarizing key business metrics to streamline decision-making processes without manual intervention.

DATA AND REPORTING PROFESSIONAL | Humana | Remote

June 2021 – May 2022

- Built Python-based automation scripts that replaced manual Excel reporting, eliminating 3+ weekly hours per user and delivering weekly batch reporting via Power BI for 100+ associates.
- Translated business requirements into technical specifications for a Marketing Power BI dashboard and user documentation; established centralized data governance practices that enabled consistent cross-team access to 51+ location datasets.
- Led adoption of a self-service analytics dashboard for 30+ stakeholders, reducing work item volumes by 15%.
- Completed high-volume work items over a 4-month period (366+ hours), translating business partner goals into technical data models and reports to support client objectives.

EPIDEMIOLOGIST | Cabinet for Health and Family Services | Frankfort, KY

June 2017 – March 2021

- State Government agency supporting public health data integrity across local, regional, and state-wide scope.
- Reduced compliance reporting turnaround time from 6 hours to under 30 minutes through SAS automation, meeting strict regulatory deadlines consistently while maintaining data integrity across state records.
- Responded to more than 150+ stakeholder requests annually, supporting organizational goals to improve public health reporting standards and client satisfaction.
- Translated business problems into technical requirements for IT staff, providing effective support in solving data quality challenges that improved overall task efficiency for clients on a city, state, and country-wide scope.

EDUCATION AND PROFESSIONAL DEVELOPMENT

Certificate of Completion: Data Engineering Zoomcamp | Data Talks Club – Remote

- **Focus:** Infrastructure (Terraform, Docker), Production ETL Pipelines, dbt Modeling, Kafka Stream
- **Portfolio:** https://github.com/ammartin8/data_engineering_zoom_camp

Certified Azure Data Engineer Associate | Microsoft – Remote

- **Focus:** Cloud Architecture, Data Engineering Pipelines, Azure Fundamentals

Data Engineering Fundamentals Professional Certificate of Completion | IBM – Remote

- **Focus:** Python for Data Science, SQL for Data Science, Data Engineering Basics for Everyone, Advanced SQL for Data Engineers

Certificate of Completion: Code Louisville Program | Code Louisville – Louisville, KY

- **Focus:** Front End (React JS, HTML, CSS, JavaScript) and Back End Development (Python, SQL)

Master of Public Health (MPH) | University of Kentucky – Lexington, KY

- **Focus:** Geographical Information Systems (GIS), Statistical Analysis Software, Advanced Bio-statistics
